

A. Specimen

Scanned specimen sheet - Fixture Record 03 - not a real document

EXPERIENCE

Introduced a same-day reprint rule that removed the most common repeat visit.
Trained four colleagues on the document handover checklist and its exceptions.
Reduced paper waste by moving the default job to duplex on the shared queue.
Kept the shift roster and covered absence without extending counter wait times.
Drafted the recovery steps used when the scanner drops a page mid-batch.
Audited the archive folder monthly and cleared items past their retention date.
Set up the exception log so repeat faults were visible instead of anecdotal.
Worked with facilities on queue layout after the second-floor desk was added.
Standardised the label format used on every completed pickup envelope.

EDUCATION

Ran the weekly service review and tracked every defect through to a closed state.
Wrote onboarding notes covering scan, print and document pickup for new counter staff.
Built the daily reporting sheet the branch uses for volume and exception counts.
Handled counter escalations and logged root causes into the monthly summary.
Reviewed vendor documentation and flagged the gaps before the pilot went live.

SKILLS

Worked with facilities on queue layout after the second-floor desk was added.
Standardised the label format used on every completed pickup envelope.
Collected counter feedback each quarter and turned it into three concrete fixes.
Rebuilt the walk-in intake queue and cut median hand-in time across the counter.
Owned release checks for the kiosk build and wrote the regression list still in use.
Agreed paper stock, duplex defaults and reprint handling with the print desk team.

ADDITIONAL

Owned release checks for the kiosk build and wrote the regression list still in use.
Agreed paper stock, duplex defaults and reprint handling with the print desk team.
Ran the weekly service review and tracked every defect through to a closed state.
Wrote onboarding notes covering scan, print and document pickup for new counter staff.
Built the daily reporting sheet the branch uses for volume and exception counts.
Handled counter escalations and logged root causes into the monthly summary.

REFERENCES

Rebuilt the walk-in intake queue and cut median handling time across the counter.
Owned release checks for the kiosk build and wrote the regression list still in use.
Agreed paper stock, duplex defaults and reprint handling with the print desk team.
Ran the weekly service review and tracked every defect through to a closed state.

Second scanned sheet. The handoff carries two pages, so paging is real.
No scanner produced this file; it is a fixture rendered from a PDF.
